

# Impression Series® Sulfur Filters

Advanced Technology to Solve Extreme Sulfur Odor Problems

## Customized to

- Remove sulfur
- Remove "rotten egg" odors
- Reduce turbidity

**Impression**®  
SERIES

Impression Series® Sulfur (IMS) Filters are highly effective in removing sulfur odors commonly associated with problem well water. Its innovative design uses a safe, catalytic carbon bed in combination with an air charge chamber to oxidize and capture the elements that cause sulfur odor and other unpleasant smells. IMS Filters are environmentally safe — no toxic chemicals are used like in other systems. The result is simply refreshingly good water from the tap, every time.

- Solid-state microprocessor control
- Easily programmed for optimum performance by your Water-Right installer
- Extended lithium battery backup
- Advanced history and diagnostic screens
- Environmentally safe — no chemicals
- Low cost operation

**Water Right**®  
The Right Water  
for Life

# Impression Series® Sulfur Filters

Advanced Technology to Solve Extreme Sulfur Odor Problems

Advanced controller simplifies operation while minimizing water usage.

## It's the Media ...

The high-grade, activated carbon media is produced with a patented process and manufactured to develop catalytic functionality. It is unique in that it concentrates contaminants within the pores of the carbon and then promotes their reaction on the surface of the pores.

## It's the Electronics ...

The microprocessor captures all water softener operations, including gallons per day, total gallons, peak flow rates, and total regenerations. Time is also held in memory and protected by a built-in battery backup.

## It's the Control Valve ...

A rugged, Noryl™ control valve handles high flow rates without dropping household water pressures — like when showers, toilets and faucets are all in use at the same time.

## It's the Company ...

Since 1963, Water-Right, Inc., a family-owned company, prides itself on providing both professional and personal service. Today, the Water-Right brand is found around the globe as we continue to provide *"the right water for life."*

## Protect Your Household

Impression Series Sulfur Filters are proven successful in effectively removing sulfur odors commonly found in well water anywhere. IMS Filters are often used in combination with other Impression Series water conditioners to provide a total water treatment solution. And, all IMS Filters are environmentally safe, eliminating the need for messy or toxic chemicals and feed pumps.

With these combined components — media, electronics, control valve and the Water-Right company itself — no other water treatment solution can compare in features or performance. Protect your home and your family with the best.

Impression®  
SERIES

## How It Works

The catalytic sulfur carbon media bed works in combination with an air charge chamber within the tank to oxidize and filter the elements that cause sulfur odors and other unpleasant ground water smells. At the programmed time, the system will regenerate using ordinary water to backwash the system clean of sulfur and other well water contaminants.
